

Installation Instructions for Android

Hardware requirements: To use the 3D Hologirlfriend Android app you must have an Android device that support ARCore.

ARCore requires:

- Android 7.0 or later (some models require newer versions as noted below)
- Device that originally shipped with the Google Play Store
- Play Store requires internet access in order to update ARCore

For more information check the Google Documentation [here](#).

Set-up:

1. Before installing the APK from our website you will need to allow your device to install apps from outside the Google Play Store:
 - Go to **Menu > Settings > Security >** and check **Unknown Sources** to allow your phone to install apps from sources other than the Google Play Store.
 - **Android 8 Oreo and 9 Pie do things a little differently.** Rather than check a global setting to allow installation from unknown sources, you'll be prompted to allow your browser or file manager to install APKs the first time you attempt to do so.
2. Download the APK file from the website to your device.
3. Once the APK is downloaded to your device double-click on the APK file.
4. The app will install and say that it doesn't need any special access (later when installing the app it will ask to use the devices camera and microphone).
5. After installing, open the app. The app will ask for access to the camera and microphone the first time you open it. This is required in order to show the holograms on your camera and for you to be able to interact with the voice-enabled Artificial Intelligence. We do not use the camera or microphone for any other functionality.
